

THE EMPRESS EXPRESS

VO. LXXVII, No. 18

EMPRESS, ALTA. THURSDAY, Oct. 3, 1929

Price: \$2.00 Per Year.

United Church

Commence Evening Services

Church School, 2:00 p.m.
Public Worship, 7:30 p.m.
Special music will be rendered by the men's choir at the evening's service.
Services will be conducted at:
Wainfleet, 11:00 a.m.
Leland Hall, 2:00 p.m.
Social Plains, 3:30 p.m.
Everyone please note the changes in the hours of service. You are invited to come and worship with us.
Rev. Geo. A. Shields, Minister.

Hartley Shannon, who is with an airplane manufacturing concern in the States, is spending his holidays here and at Medicine Hat.

Mr. and Mrs. I. Bowler, and baby, left for Medicine Hat on Saturday. The child underwent a critical operation this week in the Medicine Hat General Hospital.

Mr. and Mrs. Erwin Tucker and Mrs. Garry Tucker returned to Medicine Hat, Sunday afternoon. Mrs. G. Mackenzie, of Medicine Hat, returned by car with Mrs. G. Tucker, on Monday.

C.P.R. Officials Visit Drumheller

The special carrying a group of men over the C.P.R. lines in the west, were visitors over the new Rosemary line to Drumheller recently.
In addition to Mr. Beatty, the special carried as guests of the line, Lord Shaughnessy, Sir Charles Gordon, President of the Bank of Montreal; Sir George Giesse, of Montreal; J. Richardson, Winnipeg; Dr. U.S. Martin, Deneau; McGill University; Rose McMaster, President of the Steel Co. of Canada; W.A. Black, President of the Ogilvie Milling Co., Ltd.; S.F. Meredith and Pat Burns; Calgary officials of the C.P.R. on board included, D.C. Coleman, vice-president; Mr. Halkett, Supt. of Western Lines; T. McNabb, Winnipeg; Harry K. Smith, Winnipeg; Mr. Hobbs, Toronto, and C.N. Tilley, K.C., Toronto.

The majority of the cars were finished in blue and white enamel and are examples of luxurious travelling equipment.

Harold Boyd, Allan Yancey, Bill Pawlak and Miss Winnie Rowles, returned to Saskatoon this week to take up their studies at the University.

Miss Gillies, of the nursing staff of the local hospital, returned from her holiday vacation this week.

Notice To Threshermen

Owners or operators of threshing machines and combined harvesters are required to have their machines registered with the Department of Agriculture and to send the Department at the end of the threshing season a report showing the number of acres and number of bushels threshed. This applies whether the machine is to be used for custom work or only for the owner's crop.

Special forms for these returns may be secured from the PUBLICITY BRANCH, Department of Agriculture, Edmonton.

The Search for Oil

5,500 Acres of Lease are Acquired Near Empress

Under an arrangement completed Saturday with the Range Oil and Gas Co., says the Calgary Herald, an absolutely new Alberta area will be drilled for oil, starting within a month by Montreal capital represented in Calgary by H.B. Robinson & Co., of which James Ryan is manager. Mr. Ryan confirmed the information Saturday.

He says the district that will be drilled lies about twelve miles south of Empress and is close to the Saskatchewan border. This area was surveyed by Dr. C.O. Coulter, geologist, at the instance of Calgary capital six years ago. Dr. Coulter took his party by boats along the South Saskatchewan river and located structures which were subsequently covered by leases by the Range Oil and Gas Company. Five thousand five hundred acres of these leases have been acquired by the group which Mr. Ryan represents and a \$5,000,000 company was in process of organization to develop oil and other properties in Alberta.

Mr. Ryan said that a merger of several companies, along with the inclusion of Montreal and local capital, was involved in this organization but he was not at liberty to give further particulars. He planned to go to Montreal almost immediately to conclude the arrangements.

The district which will be drilled is highly recommended by Dr. Coulter, following investigations extending over six years. The nearest points at which development has already taken place are Many Islands Lake to the southwest, Oyen to the northwest and Outlook, Sask., to the east.

Mr. Ryan said that wet gas was encountered at Empress when a community well was sunk in quest of a gas supply in 1919. This gas was too wet for the required purposes.

Dr. Coulter in a statement to the Herald, said that his Alberta investigations had taken him 5,000 miles by land and 1,000 miles by water. He had two competent assistants, and their conclusions after an exhaustive survey, was that the greatest petroleum zone would be found in a broad growth extending 200 miles or more in the eastern portion of the province.

"This very petroliferous area," Dr. Coulter continued, "may be briefly outlined as being in which from 50 to 75 miles extending roughly from the Sweetgrass hills (with a possible structural connection with the Kevin-Sunburst fields, Montana), thence sweeping northerly and north-easterly, including

Fuego Well Strikes Lighter Grade of Oil

Oyen, Alta., Sept. 30.—The Fuego oil well, after having been drilled about 39 feet deep, struck a lighter grade of crude in good quantity Sunday night at 11 p.m. The well has every indication of being a producer. The depth is now 3,165 feet.

Fuego In Production

Another strike of a lighter grade of crude oil is reported to have been made by the Fuego Oil Co., at their well on Monday morning. The new strike is said to be a red oil of the quality which is being sought for in Alberta. An estimated flow of 75 to 100 barrels a day is given. The hole is to be drilled deeper in an endeavor to increase production. Following the report of the strike another rush from Oyen took place to fill oil leases.

Baseball Pitchers Hurdled Eggs

It took three crates of fresh eggs, fifteen signs and every baseball expert on the Metro-Goldwyn-Mayer lot to film one scene in William Haines' starring picture showing this week at the Empress theatre entitled, "Excess Baggage."

The scene was laid in a vaudeville theatre, where the audience, disgusted at Haines' alleged wit, throws eggs at him. Unfortunately, when Director James Cruze tried to film it, no one could hit the sign. After ruining half a dozen signs and all the eggs in sight, Director Cruze finally halted production for target practice.

The winning competitor proved to be the studio horseshoe champion, who from a distance of twenty feet put six eggs in a row within the bulls eye.

The new Catholic Church is being prepared for an exterior finish of stucco.

ing Skiff and Chin areas, Taber, northerly, including the structures on the South Saskatchewan river, 75 miles north of Medicine Hat, wherein the gas is known to be wet at shallow depths at Empress, Oyen (the location of the recent discoveries of valuable crude); thence northward to Rillito and Wainwright, and farther north, where undoubtedly a great drainage of crude took place from the greatest and thickest areas of heavily saturated sands following the gradual geological upheaval which took place at the birth of the Cordilleran range.

Dr. Coulter said that the deeper drilling on the prairie structures was to be encouraged. He urged this in Rillito, Wainwright and other fields.

A Pleading Production

The Richard Kent Stock Co. playing here on Monday in "Money Mad," drew a good attendance. Miss Abbott, the leading female, magnetized the audience with her demonstration. Everyone was well pleased with the demonstration.

Health Service of the Can. Medical Association

THE HEART

The heart is a most important organ which acts as a pump and thus keeps the blood moving throughout the body. Any unusual condition of one part or organ of the human body may result in the upset of other organs, such as the heart, with perhaps some permanent damage.

Pain in the region of the heart does not always mean heart disease. It may be due to some heart condition, but it is much more frequently caused by some condition of the stomach, such as improper digestion of food. Usually the first symptom of the heart's being below par is shortness of breath on slight exertion.

In old age, it is not unusual to find that the heart is not doing its work as well as it did. This is part of the general wearing out of the tissues and men's life must be so regulated that neither at work nor at play it be given more to do than it can accomplish without exhaustion. Persons, young or old, who have a weak heart or damaged heart, can live long lives of usefulness, providing they avoid doing such things, as heavy lifting, which throw sudden strain on the heart. They must also avoid those activities which cause shortness of breath or pain, always stopping immediately to rest when symptoms appear. Exercise in the form of work or play which does not cause symptoms is usually of benefit.

The most common cause of heart disease in young people is infection. The germs which settle down in diseased tonsils, adenoids and teeth very often travel around the body. They may, and very frequently do, attack the heart. The heart may also suffer from the germs and the poisons produced by the germs in such diseases as diphtheria, scarlet fever and influenza. Damage to the heart is a comparatively common result of acute rheumatism. Syphilis is also an infection which

Successful Red Cross Tag Selling Campaign

The Ladies of the I.O.D.E. were very successful in their selling of tags on Saturday for the Red Cross Children's Hospital.

is very liable to attack the heart and blood vessels. The removal of infected parts, such as diseased tonsils and the avoidance of infection are the basis of the prevention of heart disease.

Questions, concerning Health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered personally by letter.

NOTICE

NOTICE is hereby given that, in accordance with the provisions of the Irrigation Act, the undersigned has filed the application required by sections 18 and 15 of the said Act, with the Commissioner of Irrigation, at Calgary.

The applicant applies for the right to divert sufficient water from Empress creek at a point on the Northeast quarter 24, township 25, range 1, west of the 4th meridian, for irrigation purposes, and for the right to construct the necessary works as shown by the Memorial and plan filed, to enable the waters so diverted to be used for the said irrigation purposes, on the following lands, viz: the northeast and southeast quarters of section 24. DATED at Empress, Alta., this 29th day of September, 1929.
PEARL G. MASHBULL, Applicant.

TENDERS FOR SCHOOL HOUSE

Sealed Tenders will be received by the Board of Trustees of Acadia Valley School District No. 3078 at the office of the Secretary-Treasurer up to noon, October 10th, 1929, for the erection of a two-room frame school building after plan number 67. Plans and specifications may be obtained from Secretary-Treasurer on payment of a deposit of \$5.00. Plans must be returned with the tender as a guarantee that some is "bona fide." The lowest or any tender will not necessarily be accepted.

(Mrs.) I. M. PERGUS, Secretary-Treasurer, P.O., Acadia Valley, Nearest Station, Acadia Valley.

Britain and Canada

Canada is honored at the present time by having among its visitors three notable British statesmen, Hon. J. H. Thomas, Minister of Employment in the Ramsay MacDonald Government; Hon. Winston S. Churchill, former Chancellor of the Exchequer; and Mr. Amery, former Minister for the Dominions. Mr. Churchill and Mr. Amery are in Canada on holiday, but they are none the less closely studying conditions and ascertaining the sentiment of this country in regard to vital questions of Empire policy such as immigration, trade and commerce, and the possibilities of closer relationships in matters for the general advancement of both Mother Country and this Dominion.

On the other hand, Mr. Thomas' visit to Canada is made in his official capacity as Minister of Employment with the object of endeavoring to find out in what ways Canada can assist in solving the serious unemployment problem in Britain without doing injury to itself, and, having discovered, evolved, ways and means to accomplish this object, to secure the co-operation of the Canadian Government and the Canadian people in carrying them into effect.

Fortunately, the first impression created by Mr. Thomas' mission has been removed. As the minister charged with the task of solving the unemployment problem in Britain, it was felt that Mr. Thomas was coming to Canada with the idea of developing some immigration policy whereby large numbers of British unemployed would be transferred to this Dominion. Anxious as Canada may be to have a large proportion of its incoming settlers of British birth, this Dominion is not prepared to have thousands of men dumped into the country solely because they cannot find work at home and who have no training or aptitude for life in this land. Mr. Thomas has made it abundantly clear that he has no such intention; on the contrary, Mr. Thomas declares: "It is not my aim to solve my unemployment problem by creating one for you." Unemployment and immigration are, he says, two quite separate and distinct problems and should be tackled as such.

Then what is Mr. Thomas' proposal to Canada? It is simple, clear-cut, workable, and one that should find favor with, and the sympathetic support of the people of Canada. In a word it is that our large Canadian corporations, and our people generally, should, when making purchases buy British-made goods and articles, if such are not made in Canada, in preference to buying from any other country. He has asked the Dominion Government to give encouragement and support to such a policy. He has met in conference with the heads of the Canadian Pacific and Canadian National Railways and asked them to follow such a policy. He has said to the officials of the Canadian Wheat Pool: "Britain is the largest purchaser of your wheat. We are your best customer, just as we are Canada's best customer. Thus, when you require machinery or other things which Canada itself does not manufacture and cannot supply, we ask you to buy from us, rather than from others."

This should appeal to the people of Canada as good business. It is a self-respecting proposal for both parties to it. For example, Mr. Thomas points out that Canada imports over 10,000,000 tons of coal from the United States. He wants and says he is going to get some of that coal business for Britain—Canada's best customer—and thereby assist the coal mining industry of the old land and supply work for some of the thousands of unemployed miners there, as well as a cargo for British boats, thus providing employment for British dock hands, sailors, and all and sundry having to do with the business of shipping.

Such a policy will strike a responsive chord with the people of Western Canada, who are not particularly favorable to any policy of restrictive tariffs, or other forms of restraint on trade, and who firmly believe that the proper policy for this Dominion to pursue is to offset tariff action by other countries against Canada by further reducing tariffs on British goods and thereby assisting to substitute British-made goods for those of other countries.

The success of such a policy lies largely with the individual Canadian citizen. He can make it a success by stipulating when making any purchase that, first, he must have an article made in Canada, and, if that cannot be obtained, second, that it be British-made. Importers, wholesalers, distributors, retailers, will quickly adjust their stocks to comply with the popular demand.

Leaving all sentiment aside, it is good business for the people of Canada to support and buy from their best customer. The more we buy from Britain, the more Britain can afford to buy from us.

Silver Dollar Out Of Date

Fifty Million In U.S. Treasury But No Demand For Them

The silver dollar has joined the horse and buggy and other remnants of the past and has faded from circulation, while the nickel half-dollar is still used in the West and is going out of use in the East, because quarters are favored for tipping, according to U.S. Treasury officials.

At the present time there are about 50,000,000 silver dollars tied up in the Treasury to back up silver certificates, although they could easily be placed in circulation if there were a demand for them.

New Car For King George

Has Six Wheels and Will Travel Over Roughed Roads

A six-wheeled motor car built over a chassis on land has been delivered to the King at Sandringham, Norfolk. It is an all-steel production designed to travel over the roughest moors and broken ground and even over ploughed land, while it can travel at 60 miles an hour on the open road. The car has detachable rubber caterpillar treads for really rough ground.

The proposed canal across Nicaragua, to link the Atlantic and Pacific, would be bigger than the Panama Canal.

A new type of lifeboat, recently tested in British waters, holds 300 passengers and is equipped with radio.

Any job is easy when you like it and hard when you dislike it.

Was Victim Of Glacier

Body Of Austrian Recovered After Eighty-Three Years

Eighty-three years ago, Norbert Maltersberger, at the time 32 years old, husband of Magda, and father of Franz Otto, failed to return to his cottage, in the village of Kals, Austria, one day from the woods, where he won his living hunting game. A rescue party from the village decided he had been caught in an avalanche of ice.

Recently Maltersberger came home just as he left that day in 1866. The glacier had given up its prey. Although clean shaven, according to family records, when he left, he had a two-inch beard when a party of hunters found him on the edge of the glacier. The body, clothes, and weapons were in a perfect state of preservation.

Franz Maltersberger is now 86, his father was buried at Kals, while grandchildren and great-grandchildren mourned at his grave.

WHAT OUR GIRLS NEED

When Languid, Anæmic and Peeling Run Down

When a girl grows languid, dull and irritable when her color fades and she becomes pale, you may be sure that the cause is anæmia, or impoverished blood. The bright, rosy color of the blood is caused by the presence in it of millions of tiny red corpuscles. It is these tiny bodies that carry nourishment from the blood to the tissues. They also carry the glow of health in cheeks and lips.

If a girl's blood is deficient, these red corpuscles her body is under-nourished, her nerves starved, and there is a serious danger of decline. What is needed is an improvement in the quality of the blood, and it is a scientific fact that a course of Dr. Williams' Pink Pills will so enrich and purify the blood that all traces of anæmia and its attendant weakness will disappear.

As an evidence of the value of Dr. Williams' Pink Pills for Pale People, P.E.I., says: "I am glad to take this opportunity of recommending Dr. Williams' Pink Pills. My daughter was in a badly run down condition; very pale, nervous and much under weight. We tried several medicines, but they did not seem to do her any good, so I decided to give her Dr. Williams' Pink Pills. Almost from the start she began to improve, and she had a few boxes she had gained in weight, her appetite improved and she had a better color in her cheeks."

In fact she had fully regained her former good health. She has advised every mother of young girls to give them Dr. Williams' Pink Pills at the first sign of an anæmic condition. You can get these pills from any medicine dealer or by mail at \$6, a box from The Dr. Williams' Medicine Co., Brockville, Ont.

World Harvest Larger

Wheat Acreage of Many Countries Increased in Last Year

Present indications are that the world acreage of wheat to be harvested this season is 199,300,000 acres, larger than that of last year. The 1929 wheat acreage in 21 countries is estimated to be five million acres more than in 1928. Areas reported in all European countries total 50,362,000 acres, an increase of 1.4 per cent. over last year.

Worms in children work havoc. The pests attack the tender lining of the intestines and if left to pursue their ravages undisturbed, will ultimately perforate the wall, because these worms are of the hook variety that cling to and feed upon the intestinal surfaces. Miller's Worm Powders will not only exterminate these worms, of whatever variety, but will serve to repair the injury they have done.

Chinese writers state that in the third century B.C., China had wide highways lined with shade trees spaced at intervals of thirty feet.

An Indian spider's web, only six inches wide, was found to contain over 41,000 microbes.

Cramps Diarrhoea Pains in Stomach

For Light, Milford, Ont., writes: "I became very ill, lost my appetite, had cramps, diarrhoea, and severe pains in my stomach."

"I purchased a bottle of Dr. Fowler's Wild Strawberry and before I had taken half of it I was completely relieved and have had no symptoms of the trouble since."

"I cannot praise highly, and will never be without a bottle of it in the house."

"It is pleasant to take and acts very quickly."

"My brother had the same experience with it as I had."

Dr. Fowler's has been on the market for the past 31 years; you don't experiment when you buy it. Price 50 cents a bottle at all dealers; put only by The T. Milford Co., Ltd., Toronto, Ont.

Wonderful Discovery Of German Experts

Treatment Given To Living Trees Makes Lumber Partly Fireproof

A this mineral soup, fed to living trees to make their wood partly fireproof after it has been cut and made into boards, has been invented by experts of the College of Forestry, at Tharandt, Germany. The process is a modification of one invented some time ago to dye the wood of a living tree to any desired color. For this purpose solutions of the desired dyes were placed in holes bored in the tree close to the ground. As the sap rose the dye went with it, gradually coloring the wood. In the new fireproofing process, the dye solution is replaced by a bowl of the new "soup" containing compounds of silicon and fluorine and other chemical elements, so arranged that the solution flows little by little into the hole bored in the tree trunk. As with the dye solution, these chemicals are absorbed slowly by the tree and carried up by the rising sap into every fibre of the wood. The solution is too diluted to damage the living tissues of the tree. Instead, its chemicals are gradually converted into mineral deposits throughout the wood, such as happens in the course of millions of years to wood buried in mineralized ground and slowly turned into stony fossil.

To carry this mineralizing process too far in the trees intended for timber is undesirable, since the mineral deposits make the wood harder than the German experts wish to have succeeded, however, in mineralizing trees just enough to make their wood almost fireproof without destroying its properties as wood.

Might Be Good Idea

Everyone in Japan Compelled To Carry Identification Disc

"Where's your identification disc?" In the near future you may be stopped by a policeman and asked this question. If you can't produce the disc, it may mean a police court summons and a fine, says a writer in *Answers*. This may sound far-fetched, but a coroner remarked the other day that it would be a good thing if everybody carried an identification disc of some kind, and was informed by a police officer that this was compulsory in Japan. There everyone wears such a disc around the neck from birth onwards. Apart from the convenience in accident cases, it would also be a safeguard against loss of some kind, of which there have been many instances.

Several Canadians Also Received Honorary Degree At Dalhousie University

America's minister to Canada, Hon. William Phillips and Canada's minister to the United States, Hon. Vincent Massey, were among those receiving honorary degrees at Dalhousie University's reunion convocation. Other distinguished men to be honored were Hon. E. N. Rhodes, P.C., Premier of Nova Scotia; Hon. A. K. MacLean, president of the Exchequer Court of Canada; Chief Justice of the Supreme Court of British Columbia.

Mother Graves' Worm Exterminator will drive worms from the system without injury to the child, because its action, while fully effective is mild.

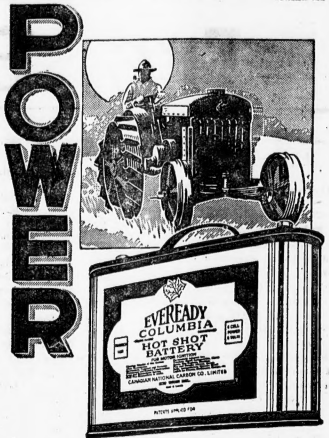

New Company Organized Will Manufacture Briquettes From Dried Coal In Souris District

The Canadian Coal Briquettes and Power, Ltd., has been organized by a number of prominent financiers and coal men in western Canada to manufacture briquettes from the dried raw coal of the Souris District of southern Saskatchewan. Dried lignite coal and powdered fuel will also be manufactured. The company, it is stated, owns 800 acres of coal in the Souris District with an estimated tonnage of 8,000,000 tons.

Miss Oldsby: If I should lose all my money would you love me just the same?

Mr. Seashunter: Just the same, my dear, only I'd be so busy earning my living you wouldn't be able to notice it.

Western Representatives: HUNTER-MARTIN & CO., REGINA, SASK.

Deadlock Is Seen Between Buyers And Sellers Of Wheat

Ottawa.—Those government officials in Ottawa with long experience in the wheat trade of Western Canada view the present situation that there is almost a deadlock between the Canadian sellers and the one hand and the British buyers on the other, as something of a manoeuvre for position. The officials decide to forecast what the outcome will be because, they say, the men responsible on both sides of the Atlantic, will for obvious reasons, not disclose their plans. There is no deep plot, they contend, just shrewd sellers meeting shrewd buyers with a world position that gives wide range for speculation.

Now with world conditions pretty well canvassed, with some idea of what amount of wheat Argentina will produce, what Australia will have and a fairly accurate knowledge of what the North American continent can export, the men face—the buyers and the sellers—again at variance as to what the price should be. The issue, these officials state, will largely depend on whether one side is forced to buy first or the other side compelled to sell.

The situation as described by officials of the Department of Agriculture is one of absorbing interest. Last year Canada had an exportable surplus of some 400,000,000 bushels of wheat after taking care of the upwards of 100,000,000 bushels used in Canada for all sorts of domestic consumption and export, as well as wheat required for seed and for feed. That was almost half of the world's entire exportable surplus.

Prices were low and no one in the trade was making much money out of it. This summer the hot wave and the drought hit the prairies about the time there was an impulse imparted to the present between the buyers and the sellers. This turned the scale in favor of the holders of wheat and prices shot upwards. Then came word of better crops in Europe which caused prices to sag.

Canada has carried over about 100,000,000 bushels of last year's wheat crop, the largest carryover in the history of the Dominion, but of course last year's crop was also the largest. Perhaps 140,000,000 bushels of the new crop will be available for export after taking care of the domestic demand. Thus, even with the carryover, the elevator carrying government officials predict that wheat will not be "axed" to the extent of last year's bumper crop. With world conditions as they are, it is contended that the Wheat Pool and the private companies are in a pretty strong position in holding the wheat. Approximately 20 per cent of the carryover is claimed to be owned outside the Pool. Of course the higher price the Pool gets brings more money to Pool farmers and the so-called circles here do not expect the earnest deadlock will last any considerable period.

Moslem Arabs Called Upon To Revolt And Move Against Palestine

Jerusalem.—Moslem Arabs throughout the Holy Land and the bordering states are being called upon by highly inflammatory propaganda to revolt and move against the government of Palestine.

Floods of this propaganda material were said to have emanated from Haifa, Haifa, Egypt, Damascus, Beirut and Aleppo and have been instrumental in the smouldering of renewed discontent which some report as portentous.

One of the proclamations in circulation among the Arabs heralded as a "holy war" and called upon all Arabs to help Arabia and Palestine, where no condition was described in the blackest terms.

Although Jerusalem and Haifa, British troops continued their incessant clashes with bands of tribesmen who have penetrated the Palestine borders.

Reports prevailed, despite official denials, that skirmishes with Bedouins have occurred near Beer Sheva, in which six native Christians have been killed.

Jews who held the first proclamation of the high priest Theodor Herzl, John Chancellor, as aiding and abet-

Gardiner Government Goes Down To Defeat

Remarkable Political Situation In Saskatchewan Ends With Want Of Confidence Vote

Regina.—The Liberal Government in Saskatchewan after a tenure of office of 24 years, went down to defeat on the floor of the Legislature on a vote of want of confidence. The defeat was brought about by the elected representatives of the people, Conservatives, Progressives and Independents joining together on the want of confidence vote.

The official count of the vote was: Opposition, 34; Government, 27. Only one member of the House was absent when the vote was taken, namely, D. A. Hall, the Liberal member for Cumberland.

Mr. Gardiner closed the debate on the want of confidence motion for the Government, and was followed by E. B. Whalley, Progressive member for Rimbey, who made a short statement indicating the attitude of the Progressive members on the constitutional issues raised, and that they intended to support the motion.

C. C. Stewart, Independent member for Yorkton, seconded the motion, and stated that the Independent group would also vote for the amendment.

No member of the Conservative group spoke on the amendment, and at the conclusion of Mr. Stewart's speech the speaker called for the vote.

Big Aviation Event

Important Race For Aviators May Be Held In Canada

Toronto.—The rapid development of air navigation in Canada during the past few years promises to culminate in an aviation event in this country which is expected here to rival in importance that for the Schneider cup, now the international classic of Europe.

In view of the fact as a result of the training received in the war, Canada numbers a considerable body of expert air navigators, and in view of the inevitable tendency towards international air meets, C. O. Stillman, president of the Imperial Oil Company, has made an informal announcement to the effect that his company contemplates a contribution of \$50,000 for the purpose of promoting an international race to be called "The Imperial Air Derby."

This race will begin at some point in flying circuit in Canada, possibly in the west, and end at a Canadian field, on some date next year to be announced later.

The amount suggested as prizes is said to be far in excess of any inducement yet offered on this continent for an air race, and it is bound to attract the premier pilots and the most modern machines not only of Canada and the United States, but of other countries.

Infantile Paralysis In East

Quebec Schools Delay Opening On Account Of Outbreak

Quebec.—Due to the outbreak of infantile paralysis in this district, it was decided by the Protestant Board of School Commissioners to postpone the opening of schools until Sept. 10. Schools in this city generally open the first week in September.

Dr. Alphonse Lesard, director of the provincial hygiene department, announced that the department was not in a position to supply convalescent serum to combat the disease, but in the event of urgent need would endeavor to secure a supply.

London.—The situation in Palestine continues grave in character, where no troops have been sent, according to advices received by the Exchange Telegraph agent at Cairo.

At Haifa, Jewish shops are still closed. The situation is, however, and Jews are returning work, Curfew regulations are maintained and troops patrol the streets nightly.

VETERAN NEWSPIAPERMAN

Edward H. Macklin, president of Manitoba Free Press, who was honored at Winnipeg on the 50th anniversary of his entry into his profession.

Canada's National Parks

American Visitor Thinks Parks Of British Columbia Ahead Of Those In United States

Washington.—A trip through the Canadian Rocky Mountain National Park has convinced Mayor Ralph Bauer, of Lynn, Mass., that the management and upkeep of the British Columbia park is far ahead of the American National Parks, which he has also toured. He has written a letter to Senator David L. Walsh, of the country, but were doing their best to investigate it and its opportunities for the expansion of commerce.

Mayor Bauer stated that the Canadian roads were better made, and wider and were well lighted. There was no charge for admittance and the whole reservation seemed to be run for the people to whom it belongs rather than for concessionaires. He made an effort to lead the people to the last dollar possible.

Returns From Arctic Trip

Steiner Beathle Back From Eight Thousand Mile Voyage

North Sydney, N.S.—The sailor "Beathle," back from eight thousand miles, and six weeks of threading the eastern archipelago of Canada's Arctic sea, arrived here recently. Scientists and the evidence of their discoveries in the north, welfare workers among the Eskimos, and members of the Canadian Mounted Police, back to civilization from their patrol of the world's northernmost waters, were on deck when the Department of the Interior's all-purpose supply boat docked here.

Among them is J. D. Soper, Canadian government naturalist, bringing with him to Ottawa the first blue goose ever seen by man.

Hon. R. B. Bennett In Ottawa

Returns To East After Five Weeks' Tour Of British Columbia

Ottawa, Ont.—Hon. R. B. Bennett, opposition leader in the House of Commons, returned to the capital from a five weeks' tour of British Columbia, in course of which he delivered more than 60 addresses.

The Conservative chief returned more impressed than ever with the achievements and potentialities of the Pacific coast provinces. He said, however, the failure of the present government to provide adequate protection was imperilling the best growing districts, where, he said, the growers, unable to find home markets, were sending carloads of fruit to the United States on consignment—willing to take any price.

Parity Between British And United States Navies May Be Agreed Upon

Peace River Tour

Large Party Of Business Men Leave Edmonton On Three Special Trains

Edmonton.—Enthusiasm has been aroused throughout the entire west of Canada over the tour which started from here through the Peace River District. Bankers, politicians, lawyers, medical men and business men of every shade of the commercial life, together with a large number of their wives and families, departed from here on three special trains.

Due to the departure, the Edmonton Chamber of Commerce entertained the 300 members at a luncheon at which a welcome to Alberta was given by the president, George H. Van Allen.

Wm. Birks, Montreal, president of the Canadian Chamber of Commerce which is sponsoring the tour, told the gathering that the Peace River was a name to conjure with and the eastern financial and business men and the British political and commercial figures had been lured by the glowing descriptions of the country which had reached them.

During the trip, Mr. Birks said, the members were not merely "seeing" the country but were doing their best to investigate it and its opportunities for the expansion of commerce.

Would Ask For Assurance

Premier Macdonald Should Have No Political Worries When He Visits States

London, Eng.—Discussing Premier Ramsay Macdonald's statement at Geneva, that the home parliamentary situation might possibly interfere with his trip to Washington, the Liberal newspaper, the Star, suggests editorially that opposition leaders give the Premier, before he leaves, firm assurance that the exigencies he would not face and that when he goes to Washington it will not be as the leader of the Labor Government, but as the spokesman of the whole nation on the vital issues concerned.

Speaking of the possibility of his trip, the Premier pointed out the difficulty of the leader of a party without a clear majority being out of the country while parliament was sitting.

Invitation For Ramsay Macdonald

Washington.—The American Federation of Labor will invite Premier Ramsay Macdonald to attend its 40th annual convention at Toronto, which begins on October 7, if it is found convenient for Mr. Macdonald to do so.

Commander Byrd Unveils Portrait

Los Angeles, Calif.—A radio broadcast by Commander Richard E. Byrd, from his Antarctic camp, to Little America blew an automobile horn and drew curtains from an enlarged picture of Byrd at the Seventh National Radio exposition here.

Winston Churchill Says

Great Britain's Foreign Policy One Of Peace

London.—Great Britain's foreign policy has never been one of subservience to France, but one for the preservation of peace in Europe, Mr. Winston Churchill, former chancellor of the exchequer in the Baldwin Government, declared here.

He was addressing a luncheon given in his honor, where nearly 1,000 persons greeted him enthusiastically.

He had gathered, said Mr. Churchill, that there is a tendency to misrepresent the foreign policy of which he spoke. Britain had ever recognized the need of peace.

He had gathered, said Mr. Churchill, that there is a tendency to misrepresent the foreign policy of which he spoke. Britain had ever recognized the need of peace.

Washington.—Parity as between the British and United States navies, agreed upon in the negotiations between Premier MacDonald and Ambassador Dawes, would apply to each category of combatant ships instead of the two navies as a whole.

In addition to parity on cruisers, that on destroyers and submarines is entering into the present exchanges between Washington and London. Parity in battleships and aircraft carriers was agreed upon at the Washington arms conference eight years ago, and the purpose of the present conversations between the American and British governments is to carry this program through all the fighting arms of the navies.

Should the United States and Britain agree on a parity of armaments—agreed and officials of both countries are optimistic on that point—Japan, France and Italy would be excluded from a general conference which under present expectations in high administration quarters here would be possible late in the year or early in 1932.

Whether this general conference would embrace battleships is a matter yet to be determined, but in any event a reconsideration of the battleship question must be undertaken in 1931 under the terms of the Washington naval treaty.

Some naval opinion holds that the battleship building program for four to eight years beyond the ten years expiring in 1932.

The present status of the negotiations between the United States and Great Britain in the three categories of fighting ships remains something of a mystery. Officials in both capitals decline to divulge specific information.

Opening Of H.B. Line

Regular Passenger And Freight Service May Start In December

The "Pas," Man.—The Northern Mail quater Major J. G. McLachlan, head of the Hudson Bay Railway, as follows:

"We expect the first work trains to go over a regularly ballasted track to arrive in Churchill by about next Thursday and if the demand warranted it, a regular passenger and freight service could be set into service by November."

"Work trains went into Churchill last year over the steel laid on the snow in frozen muck. It was a measure that was needed to take the line into the port for the extensive building operations of the Department of Railways and Canals."

Java Sugar Arrives

Montreal.—With the first shipment of sugar from Java for Canada, in at least 20 years, the S.S. Chain Skeene, arrived at Montreal with 72,000 bags from Tjilatjap, on the south coast of Java. The steamer made the journey in 48 days, sailing from Tjilatjap on July 13.

London.—Great Britain's foreign policy has never been one of subservience to France, but one for the preservation of peace in Europe, Mr. Winston Churchill, former chancellor of the exchequer in the Baldwin Government, declared here.

He was addressing a luncheon given in his honor, where nearly 1,000 persons greeted him enthusiastically.

Growth of Canada

Member of New York Stock Exchange Sees Great Future For This Dominion

In a recent issue of their monthly survey, a well known financial house, members of the New York Stock Exchange, states in part:

"Canada has been called one of the most fortunately situated countries in the world. Possessing the evidence of this is to be seen in the steady growth during the past several years in agriculture, mining, forestry, power, railway construction, foreign trade, bank deposits and in the maintenance of a high standard of living at a low cost. The gains in industry and trade are in many respects comparable to developments in the United States at the turn of the century.

"Questions regarding the future development of Canada, may as well be asked in the United States, and far short of the actual fact. The general impression that Canada is capable of development only over a narrow strip is not true. Modern Canada is an amazing country in future wealth. Gold and silver, iron, copper and nickel deposits are extensive, and the territory subject to future development is vast. The north country is not new so far as settlement goes, but it is far from adequate development.

"Although the population of Canada is still under 10,000,000, she maintains a high place among the leading commercial nations. No country exports a greater amount of wheat, newspaper, paper, nickel and asbestos. In the export of wheat four Canada holds second place, and is third among the nations in the export of wood pulp. In addition, a high position is occupied in the export of such staple products as wheat and timber, dairy and meat products, cattle, hides and leather products, raw fur, copper, gold, lead, etc."

A Never Ending Task

They Tree Creeper Works All Day and Every Day

It is most entertaining to watch a tree creeper at work. One of these birds was noticed by a naturalist some time ago, working on a great old elm, half smothered by strangling ivy. This tiny bird usually begins its performance at the bottom of a tree, creeping round and round like a spider. The round-about journey is made in short, jerky movements, with constant pausing to pick out insects from the crevices of the bark. The one under view completed its spiral ascent in about two minutes. Noting the insect details would be rather a difficult task because some of them are too small to be seen without the aid of a magnifying glass. On arriving at the top the adroit climber went down to another tree and commenced climbing again. It is a never-ending task performed almost in silence. It appears to climb all day long and every day.

Satisfied With Treaty

Premier Mahmoud Pasha, of Egypt, recently returned from London, addressing 7,000 Egyptians at Alexandria, said that the new Anglo-Egyptian treaty abridges the 32 years of mutual misunderstandings and suspicions between Egypt and Great Britain. He prophesied that Britain in a few years would remove entirely her troops from the Suez Canal.

"There was the tactful hotel manager who rendered the sign, 'Have you forgotten anything?' from every room of his hotel during the week of the Pimblett Convention."

A bookkeeper charged with billing a policeman, said he had not known that it was a policeman.

Five bookkeepers bother to test coppers by biting them.

"You are a comic?"
"Yes."
"Married?"
"Yes."
"Then you are a tragic-comic!"
Hummel, Hamburg.

How Fashions Change

Dizarré Costumes Affected By The Good People of Sixty Years Ago

At the opening of the Victoria Fair not long ago, Premier Colborne recalled the first fair held there, 68 years before. The ladies then wore crinolines, and small, neat bonnets held under the chin with a wide ribbon. Dainty little parasols were held resolutely over the shoulder. Their movements were slow, graceful, charming. If they hurried, the frilled lace edge of a parasol flashed for a moment round a dainty ankle.

The men's costumes were also bizarre. It was the halcyon age which gave the world the stove-pipe hat, a real stove-pipe shape with narrow edge. Full beard and whiskers were in mode, for Mr. Gillette was not yet brought his razor to mankind. Some of the young lads shaved the chin, but made up for this nakedness by sweeping down the face with a wide collar, or stocks surmounted by vests of gaudy colour; coats were mainly black, but often a bright blue or crimson, with large brass buttons. Gentlemen's pants were pulled up with the help of a shoe-born, braced up high, and also fastened under the hip.

Nowadays the Victoria fair grounds are crowded with no such sights. We see no more of the wide collar, or blown bobs, no hats, no stockings, a wisp of a sleeveless dress and a pair of slippers about ankles, and the sidewalks accompanied by youths in collared, sleeveless shirts, jazz jumpers, acres of violently checked four-square and bow tie, and a hat as if lightning had struck the wooden mill where they were woven.

Fashions change, but the blown bobs and the jazz jumpers take the same keen interest in the fat lady, the tattooed man, the human midget, the screw-malicious and the fortune-tellers as did the crinolines and stove-pipe hats of sixty-eight years ago.—Free Press.

Superstition Is Common

Nearly Every Person Has Ideas About Good and Bad Luck

A woman recently died because her superstition would not allow her to call in a doctor on Friday. Saturday was too late. That superstition still life, is to some extent proved by the fact that hundreds of thousands of people still consider that it is unlucky to walk under ladders. That it is unlucky to spill salt. That candles on a table bring bad luck. That crossed knives spell unhappiness. That to open an umbrella in the house means misfortune. Similarly, how many Londoners do not believe that it is lucky for a black cat to cross one's path, or that to fall upstairs spells a wedding? The new moon seen through glass is held to fall upstairs spells a wedding? The lights from a match is still believed, there are probably several million people in England today who exclaim "Touch Wood" on the slightest provocation. In the country villages of England, the inhabitants firmly believe that three white horses passing in the presence of a vicar of a red-haired girl, while a cross-eyed village is still an object of suspicion to be combated by crossed fingers and a whispered incantation. Sailors and fishermen are unanimously awarded points of place among the believers in the superstitions, nevertheless the Londoner is hard to beat.

Mining In Northern Saskatchewan Diamond drills will soon be working on the Mannouth group of claims in Northern Saskatchewan. It is reported that the major portion of the equipment has already been moved onto the property which has been optioned by Consolidated Smelters. The Mannouth group is situated about 35 miles northwest of Stanley Mission on the Churchill River.

Increase In Air Mail Carried Canadian Colonial Airways carried 12,000 pounds of mail during the month of July, which is a slight increase over June figures. During the second quarter, the total earnings southbound from Montreal to Albany amounted to 4,967 pounds, though the northbound movement from New York was greatly in excess of this figure.

The Kasher Way

Visitor: "Where did you get that fur coat?"
Hostess: "I got it in a swimming contest— we had to swim across the lake, and I did it in three hours and a half."

Visitor: "You poor dear. I only swam three minutes and my fur coat burst!"
Hostess: "I bought me a complete set of furs!"

NEW BOARD OF GRAIN COMMISSIONERS

The photographs here show the new Board of Grain Commissioners just appointed. They are: (1) Hon. Charles Magill Marmen, minister of agriculture for province of Saskatchewan; (2) E. B. Ramsey, chairman, general manager of Canadian Wheat Pool, with headquarters at Winnipeg, and former banker, and (3) Prof. Duncan A. MacCubbin, professor of political economy of University of Alberta, and outstanding economist in western Canada, graduate in arts at McMaster University.

Doctors Say Canned Food Is Wholesome

Research Shows It To Be As Good As When Fresh

In the minds of many people there is an old-established prejudice, to some extent fostered in the past by the medical profession, against the consumption of tinned foods, on the ground that they may be productive of some form of ptomaine or microbe poisoning. As a matter of fact, there is really no risk at all. More recent medical opinion has emphatically and authoritatively declared, after exhaustive research, that whatever may once have been the case, modern methods of canning are so perfect that tinned foods prepared by reputable firms are now absolutely above suspicion, and, moreover, that they contain at least as many of the vitamins as the necessary vitamins as the same food when fresh and unprocessed. The case for tinned foods as wholesome and nutritive articles of diet is, in fact, definitely established.

Originated Income Tax

Dr. Henry Beeke, An Oxford Don, Is Responsible For Idea

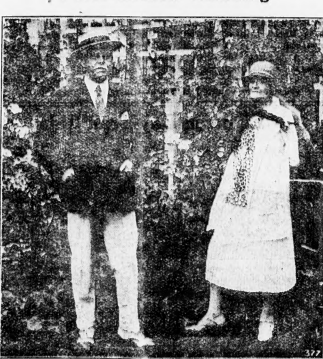

It is a curious fact that income tax was "invented" by an Oxford Don, Dr. Henry Beeke, a fellow of Oriel College, who afterwards became Dean of Bristol. Beeke's Professor of Modern History at Oxford, though his real forte was finance, and he frequently assisted "Parliament with the Budget, that statesman's long tenure of the Chancellorship of the Exchequer, and his grim satisfaction that Dr. Beeke came to a sad end. He died in exile at Torquay, whether he had fled for refuge from the "Bristol riots" at the time of the first Reform Bill.

Gypsum Industry Growing

The continued activity in the building trades throughout the whole of Canada finds reflection in the demand for gypsum building materials and in consequence the gypsum industry in Canada is showing excellent progress.

She—The world is full of rascals. This morning the new lemming gave a counterfeit half dollar.
He—Where is it, my dear?
She—Oh, I've already got rid of it. Luckily the butcher took it.

Fetes Golden Wedding

Captain James W. Troup, manager of Canadian Pacific British Columbia Coastal service, last month celebrated at one and the same time his golden wedding and the semi-centenary of his debut in British Columbia navigation. He is the eldest of three seafaring sons of Captain W. H. Troup who commanded ships between Panama and San Francisco in the fifties of the last century. James W. Troup was the first white man to navigate the Cascade Rapids, and having filled every post of honor in the company, he is now 71, knows every mile of water on the British Columbia coast. Photograph was taken of him and Mrs. Troup in the gardens of their home in Victoria.

Shipping Crates For Hogs

Method Of Constructing a Strong and Rigid Crate

The experimental farms ship out a great many hogs for breeding purposes, under individual crates in most cases. In his report for 1928, published by the Department of Agriculture, at Ottawa, the Dominion Animal Husbandman describes the method of constructing a strong and rigid crate that is light in weight. The size of the crates of hogs of different weights are for hogs up to 75 pounds, 9 inches wide, 2 feet high, and 2 feet 10 inches long; from 75 to 100 pounds the width should be increased to 10 inches in width 2 feet 2 inches in height, and 3 feet in length. Hogs from 100 to 150 pounds require a crate 1 foot wide, 2 feet 6 inches high, and 3 feet 8 inches long. From 150 to 200 pounds the width should be 1 foot 2 inches, the height 3 feet 6 inches, and length 4 feet.

In constructing a crate it is first necessary to nail the floor boards into the two floor slids then assemble each side and attach as a unit and nail together. The sides should consist of a removable gate set into grooves. Cross pieces should be placed across the top binding the ends together. Spruce or poplar satisfactory wood to use. The floor slids should be 2 inches square and nailed together in pairs. The ends or slats on each side and on the ends should be flush with the floor. The spacing between the side slats should be 12 inches. The ends should be nailed together with two uprights, or to the large crates a third may be placed in the centre.

The crate may be constructed entirely tin material five-eighths of an inch in thickness, but for the lower slats on each side wider boards up to 7 or 8 inches may be used according to the experience of the Dominion Animal Husbandman.

Will Hardly Be Successful

Scotsmen Try To Revive Popularity Of the Kilt

Patriotic Scotsmen are reviving an old-time plea for popularization of the kilt on the ground of comfort and convenience for the soldier, writer, or public servant, claims to have worn the same kilt off and on for 30 years, ever! Other contributors assert that the kilt will outlast many pairs of trousers, and the chief objections of opponents are confined to the difficulty of finding suitable headgear—straw hats, derbies, silk hats and the like are discarded for the purpose. No one seems to have risen in defence of the bonnet, the appropriate headpiece with the Highland garb, and yet it comes nearest in scantiness of material to the fashion in which youths are trying to make inside the collar of a shirt without head covering at all. It is hardly expected that the champions of the kilt will gain much support outside their own circles. As an everyday dress, the kilt has outworn its use, except as a regimental or ceremonial costume. Before the war, the automobile and the aeroplane began to bridge distances and take the rigors out of travel the kilt has declined in popularity. It is noted. Christian Science Monitor.

Animals As Swimmers

Tigers and Pigs Are Quite At Home In the Water

The animals which fall as swimmers are so told are camels, giraffes, llamas, monkeys and kangaroos, but the first two can manage, if their balance is preserved by a boat. Monkeys are often found of past, diving, kangaroos jump about in the water and would drown a bather if they by laying on him. Contrary to the tradition of centuries, pigs are at home in the water, and the swimmers are well known to swim for miles. Among the land and water the tiger stands out as a first-class swimmer.

Sure To Follow

The cabbies were having their sandwiches at lunch time. Said the first, "I've got one thing about you, Albert, you I have always thought was rather odd."

"So you're a friend," "You alias touches yer 'ore up on the right side. Why don't you give 'im one on the left side now 'at again for a change?"

"I dunno," replied his friend. "But I don't matter much, anyway. As long as I get one side 'at."

Others' pretty sure to follow!"

In one of London's hospitals last year 127 miles of bandages were used.

The orange crop of Brazil is gaining in importance

Grading Flour For Britain

Marketing Under Distinctive Marks Would Increase Demand Is Opinion

The markets branch of the Saskatchewan Department of Agriculture is advised that in the opinion of the Dominion Animal Husbandman, the distribution of flour in Great Britain, the definition of national standards of quality in the manufacture and supplies of standard qualities under distinctive marks would improve the demand for English wheat flour.

It is proposed, therefore, to introduce a scheme for the voluntary grading and marketing of English wheat flour under the Agricultural Products Act, 1928. The national mark will also be used with a grade of standard quality and a trade committee consisting of growers, manufacturers and distributors has been named by the Minister of Agriculture for Great Britain.

A registered grader (miller) must allow his business premises and all equipment and records to be inspected at any reasonable time by any officer appointed by the minister of agriculture, and when national mark is placed on the flour, it must be allowed such officer to present and take sample of wheat going forward to be milled. The scheme will come into operation on October 1, 1929.

Filming Interior Of Buckingham Palace

Will Be Used For Picture Dealing With Empire Film Trade

Huge are lamps, cameras, and all the paraphernalia of the moving picture trade, that invaded Buckingham Palace, where, for the first time in history, interior scenes are being filmed, says the London Daily Sketch. There will be used for a moving picture dealing with the empire film trade.

The film will depict a small boy who is taken by a fairy prince to the king's palace. The royal chef is seen stirring a gigantic Christmas pudding, made entirely of empire products in the royal kitchen. Work on the film is still in progress inside the palace.

Picture will be taken shortly inside the magnificent gold and scarlet throne room and the other state apartments. When the film is released the public will have its first opportunity of seeing the interior of the state apartments.

Almost the only section of the palace which will not appear in the film are the private apartments of the king and queen.

Special permission was given by the King for a British film dealing with the empire film trade to be made inside the palace during the absence of the court at Sandringham. When the journey to Norfolk was postponed, however, the king desired that the filming should proceed, according to arrangements.

World's Loftiest Capital

Bolivia City Built On Mountain 12,410 Feet Above Sea Level

La Paz, Bolivia, where the people are denominated "Indian Paraguay," is the loftiest capital in the world, for it stands on a mountain top 12,410 feet above sea level. This is 2,000 feet higher than Quito, in Ecuador, and 5,000 feet higher than Mexico City. Its nearest rival for height is the far distant Lhasa, which stands at an altitude of 11,830 feet. The mean temperature of La Paz is 50 degrees Fahrenheit. But the cold nights are unrelieved by fireless comforts, as the folk have nothing to burn, neither coal nor trees in the desolate mountainous regions around the city.

Statue—Here's that quack Ah! Corroved from yuh last year!

Sambo—Yuh done kept it so long dat Ah don't know if it's waltz or if he no change mah 'pinion of yuh jes' for two kids.

The moon's actual color is brown, astronomer's believe.

"That must have been very good whisky Jones gave us last night because there was no little of it!"
Karlukar, Oslo.

Vision of Mineral Wealth of Western Provinces Is Seen From Initial Development

Speaking of the immense possibilities of the northern parts of the provinces of Quebec, Ontario, Manitoba and Saskatchewan in the production of mineral wealth, Dr. C. V. Corlies, in an address to the Winnipeg Board of Trade recently said that Canada would never be appreciated until the people learned to turn their eyes to the north, for it is there that they will find the largest quantities of that without which the progress of civilization would be sadly hampered, if not halted altogether, namely minerals.

Minerals form the basis of progress today, for the material side of modern scientific civilization depends for its progress on man's increasing knowledge and skill in their use. And so the strength and economic success of modern nations are largely conditioned on their successful exploitation of mineral wealth. The world's growth, the power resources, man must be fed and clothed before he may advance, but his material progress is measured rather by man's growing success in shaping his mineral resources into forms to suit his own requirements.

With the opening of the vast mineral-producing areas in the northern part of Manitoba and Saskatchewan, though the work has only been begun, comes a partial realization of the potential wealth contained in these two provinces in districts hitherto thought to be of little value beyond the timber and furs. The discovery of the presence of mineral-bearing formations in the rock and promise of another mining area such as has been developed in Northern Ontario.

Nothing could bring greater benefit to the agricultural industry of the West than the development of a flourishing mineral industry, with its large sums of circulating capital, energizing the economic system in all directions. Such sound development would provide a ready near-by market for the products of the farmer, who is now so seriously hampered both by the remoteness of his market and by the limited variety of those products which can stand the present long transportation cost.

Nor would anything quicken the activities of western towns and cities more than the opportunity to supply the many other needs of a flourishing mineral industry and of its numerous workmen and staffs, who, unlike the farmer must purchase one hundred per cent of their daily needs. This country's greatest economic need today is more balanced industries, the creation of internal exchange of goods by the development of more varied industries, the happy condition which will never be fully enjoyed until there is set on foot a long chain of industries having their starting point in the minerals of the earth's crust.

As in the case of Northern Ontario, some of those greatest mineral deposits were discovered only when the railroad was being pushed through the wilderness railway system in the northern parts of Manitoba and Saskatchewan is leading to the discovery of still further deposits of potential wealth, some of which are already being converted into actual cash by those in charge of the development. Then, too, the more the lines of steel are pushed ahead in this country, the more of it is made readily accessible to the prospector and still more accessible to that just as important person, or person, the prospector who develops what the prospector has found.

Before the end of 1928 an eighty-eight mile branch railway, which was essential for the development of the area, was completed from the Hudson Bay Railway. The mine plans under course of construction and

which will take about four years to complete, will include flotation mill, with cyanide amen, copper meter and electrolytic zinc plant. It is expected to mine and treat 3,000 tons of ore a day. Hydro-electric plants for transmitting power will be erected and it has been announced that the Island Falls site on Churchill River will be utilized.

In 1915 on the northwest arm of Schist Lake, and about four miles south-east of Pin Point Lake another discovery was made. A year later diamond drilling disclosed an ore body of about 25,000 tons of massive chalcopyrite, averaging about 20 per cent, copper, with additional gold and silver values of \$5 a ton, and about 180,000 tons of lower grade copper, of considerable size.

Very soon after its discovery, this property was taken over by a company. During the war years this company took advantage of the high price of copper and the richest part of the ore was accordingly mined out and shipped to England for treatment. Although involving unusual transportation costs, 25,000 tons were moved from 1917 to 1920 inclusive. The value of this copper exceeded \$2,000,000, and the recovered gold and silver amounted to a large sum.

Prospectors in 1914, working eastward from Hudson Bay and westward from Hudson Bay Railway, found many indications of free gold in quartz veins occurring on the shores of Wekusko Lake, also known as Herby Lake. Hundreds of claims were staked and considerable development resulted. Number of companies were formed.

Many important discoveries of minerals in all parts of this great belt have followed the spreading out of the prospecting activity. A day goes by without a new discovery. One of the biggest, or possibly the biggest ore body yet found, is the Sherri-Gordon copper deposit on Cold Lake, otherwise known as Kistessing Lake, about forty miles north-east of Pin Point Lake.

Development to date has definitely placed this property in the big mine class and an off-shoot of the Pin Point branch railway is expected to be constructed during this year from Cranberry Portage to the mine, a distance of about forty miles. Arrangements for the construction of a 1,500 ton concentrator were recently announced which, it is expected, will be ready for operation by January, 1931. Production from the Sherri-Gordon is only a matter of time, a strong company having been formed to carry out the developments.

So the justified rush to the North has opened up an area which seeks the hand of friendship from the world.

Will Develop Amber Deposits

Amber and Ocher Beds in Northern Manitoba to Be Worked

A new branch of mining in northern Manitoba is a likelihood next spring with the announcement that a syndicate will develop the ocher and amber deposits at Cedar Lake. The company is known as the Charrand Syndicate, and operations are expected to start this winter. Staking of properties will be completed by this fall. Adequate insurance is in sight for the development, it is stated by officials of the company.

Delay in operations has been caused by the fact that there are no regulations governing the dredging of amber. It is understood that the syndicate is progressing satisfactorily in its negotiations with the authorities and that dredging licenses will be granted.

Surveys have shown that the major part of the bed of Cedar Lake is composed of an amber deposit, the decay of an ancient forest. A plant and varnish firm in the United States has been investigating the possibilities of the ocher deposit, and a deal for the sale of the output in northern Manitoba is probable.

That Kind Of A Loan
"A Kathleen Mavourneen loan" questioned a judge in an Irish court. "What in the world is that?" "That's what we call some loans in our parts," the witness replied. "They are the 'It may be for years and it may be for ever' sort."

Arkansas, Florida, Mississippi, and South Carolina are the only four states in the Union without some measure of protection for their workers against industrial accidents.

Win Scholarships

Canadian Pacific Railway scholarships covering five years' tuition at McGill University, have been awarded to C. P. Sturdee (left), son of E. P. L. Sturdee, assistant general passenger agent; and William P. Dunlop, son of John Dunlop, in the pension department of the railway. These young men have both done brilliant work in their respective school careers and closed them by making the highest average in the matriculation examination for entrance to the university. As minor sons of C.P.R. employees they won the right to the scholarships awarded them.

Demonstrates "Safety-Plane"

New Autogiro Makes Perfect Landing

Dropping from the skies in an almost perfectly position and landing as gently as a feather floated to earth, the new autogiro "safety plane" of the Spanish inventor, Juan de la Cierva, was put through a series of successful tests at Philadelphia. The pilot made a half-donut drop and each time came down almost vertically within a few feet of the point from which he started. Thus demonstrating, he said, the ability of the plane to land safely if the motor should suddenly go "dead" while the plane was in flight.

Musk ox and reindeer can live in one area without interfering with each other's food supply, because the food eaten by one is avoided by the other.

Shipping Eggs Via Panama

Trial Shipment From British Columbia Was Very Successful

The success attending a small trial shipment of British Columbia eggs to Great Britain last year will result in much larger exports being made this season. Some 12,000 cases have already been booked, and 8,000 cases were packed to leave Vancouver on the Dominion liner "Gragalia," via the Panama Canal. W. H. Aldrich, chief egg inspector of the Dominion poultry branch, who visited Vancouver in connection with the shipments by this route, predicts that as a result of the establishment of the British Columbia Egg Pool shipments will shortly assume considerable volume.

Sergeant: "Hey! You can't go in there—That's the colonel's tent!"
Rookie: "Then what have they got 'Private' over the entrance for?"

FASHION

No. 303—New Elegance. This style is designed in sizes 18, 20, 22, 24, 26, 28, 30 and 32 inches bust measure. Size 30 requires 2 1/2 yards of 40-inch material with 1 1/2 yards of 40-inch binding.

No. 289—Flattering Neckline. This style is designed in sizes 18, 20, 22, 24, 26, 28, 30 and 32 inches bust measure. Size 30 requires 2 1/2 yards of 40-inch material with 1 1/2 yards of 40-inch binding.

No. 783—Graduation Dress. This style is designed in sizes 8, 10, 12 and 14 years. Size 8 requires 2 yards of 40-inch material.

No. 981—Attractive Junior Frock. This style is designed in sizes 8, 10, 12 and 14 years. Size 8 requires 2 yards of 40-inch material.

No. 835—Smart Apron and Cap. This style is designed in sizes small, medium and large. The medium size requires 2 yards of 40-inch material with 5/8 yard of binding.

Plans Being Formulated For Canada's Participation In The Antwerp International Exhibition

Canada Urged To Look After Forests

Method Is Criticized By Editor Of Empire Journal

A strong indictment of the forestry methods used in Canada is made in an issue of the "Empire Forestry Journal" by Fraser Story, the editor. After referring to the ever-growing needs of the Empire for soft woods, the writer points out the magnificent white pine forests of Eastern Canada are gone and the lumber industry is now concentrating on the great forests of the West. The treatment of old stands and the neglect and abuse of young growth, in spite of the efforts of the forestry service, the absence of any form of a building 200 feet by 80 feet in the modern style, advantageously situated between the French Pavilion and the Continent Park. The building will be constructed of steel and reinforced concrete, with special roof lighting.

The entire decoration, which is on a most lavish scale, is being prepared at the Canadian Government Exhibition building at Hampton, which consists of continuous transparent frieze, nearly 500 feet long, with a wide variety of subjects, including rearing Canada's productive resources from Atlantic to Pacific. Visitors will be able to take in at a bird's eye view the products and methods of Canada's farms, fisheries, mines, forests, factories and mills.

All advertising matter will be published in French, Finnish and English, and all efforts will be centred on presenting Canada as a composite whole and not by individual provinces.

Air Mail For North

Regular Service To Be Established In Northern Alberta

A notable extension to Canada's rapidly growing air mail services will go into operation early next November, when regular air mail service will be inaugurated by Postmaster-General, P. J. Venet, between Fort McMurray, Alberta, and Alkavik, N.W.T., near the mouth of the Mackenzie River.

This which will almost parallel the historic fur traders' trail for nearly 2,000 miles north and northeast, along the Athabasca, Slave and Mackenzie Rivers, penetrates farther north than any other regular air mail service in the world and thus is a most important step in the development of Canada's vast north land region to the main arteries of traffic, also greatly increasing the frequency of communication. The winter transportation difficulties in this area, have been such that it has been necessary to depend chiefly upon dog teams for mail services. The coming of the mail plane reduces days to hours and confers an inestimable benefit on the inhabitants. There will be 14 points of call on the route, including Fort Resolution, Fort Providence, Fort Good Hope and Alkavik itself.

Sweep Of Prizes

Carload Of Manitoba Livestock Sets a Record At Western Fairs

The greatest sweep of prizes ever made by a carload of livestock from Manitoba, is the record set by Alex McNeil and Herb Clark, of Brandon, in their showing of swine over the Western Canada circuit of exhibitions. Concluding their trip at Regina, the local exhibitors found themselves in possession of 83 prizes. Forty-three animals were included in their showing, and at Calgary, Edmonton, Saskatoon, Regina and Brandon, they met keen competition, but were successful in practically every event they entered.

A Lonely Town

The loneliest village in England is in Oxfordshire. This town is five miles from Oxford, and has many agricultural inhabitants have never seen a train and few have attempted a tortuous trip to civilization. Because of its isolation, supplies cost the local villagers much more than they should.

Planning Another Flight

Another Graf Zeppelin flight to America is planned for October, according to a Friedrichshafen despatch to the Telegraph Union. The despatch added that the great German airship was expected to return to Friedrichshafen on Sept. 10.

He: "Don't go. You are leaving me entirely without reason."
She: "I always leave things as I find them."

Plans are now being formulated for Canada's participation on a princely scale in the Antwerp International Exhibition, which will be the fourth occasion on which Canada has taken part in a leading Belgian Exhibition.

The three previous occasions were at Liege, in 1905, Brussels, in 1910, and Ghent, in 1913. Until recently it was thought that Canada would take a space in the British pavilion at Antwerp, but so important is Canada's growing trade on the Continent becoming, that the Canadian Government decided on participation separate from the British exhibit and in an entirely Canadian Pavilion.

This has been designed by J. O. Tureotte, Canadian Government Exhibition Commissioner, and will take the form of a building 200 feet by 80 feet in the modern style, advantageously situated between the French Pavilion and the Continent Park. The building will be constructed of steel and reinforced concrete, with special roof lighting.

The entire decoration, which is on a most lavish scale, is being prepared at the Canadian Government Exhibition building at Hampton, which consists of continuous transparent frieze, nearly 500 feet long, with a wide variety of subjects, including rearing Canada's productive resources from Atlantic to Pacific. Visitors will be able to take in at a bird's eye view the products and methods of Canada's farms, fisheries, mines, forests, factories and mills.

All Accredited Stock

Great Demand At Vergereville Hatcheries For Baby Chickens

Ninety thousand baby chicks were sold from the Alberta Hatcheries, Ltd., at Vergereville this year, all of them being of purebred stock and accredited flocks. This enterprise was started on capital supplied by about twenty local men and is a purely commercial hatchery. In addition to this they brought in baby chicks from British Columbia to fill orders they were not in a position to supply. The capacity of the hatcheries is greater than the 90,000 produced this year and with the perfecting of one of their incubators, a home-made product with a 100,000 egg capacity, and the development of their markets, it is probable that the business will develop greatly during the next season.

At present in addition to the 100,000 egg incubator, there is also a 15,000-egg electric incubator. Will J. Gould is operator and manager and the district agricultural agent. Mr. Gould has been an active agent from the beginning of the enterprise.

The scheme started as a result of dissatisfaction with the different standards in judging birds and an increasing feeling that the poultry business should be raised to a more business-like proportion having its proper place in farm activities. This could not be done until farm flocks were increased in number and improved in quality. There was little incentive to do this with a standard of perfection as one objective and abundant of production as a counter objective or basis.

China Planning Gunboats

The Observer's Shanghai correspondent, in London, reports that British firms are negotiating with the Chinese Government for the construction of gunboats costing several millions of dollars. Although the negotiations have not been completed, it has been arranged for eight Chinese cadets to go to Great Britain to receive instruction in naval architecture.

"Do people often fall down this way, guide?"
"No, sir, never down once."
Lustige Kölner Zeitung, Cologne.

"Shall we try what honesty will do in our business?"
"No, I have no more innovations."
—Lustige Kiste, Leipzig.

Aviators Had Hard Time

Had Almost Lost Hope When Rescued in Far North

After living eight days on berries between the Gods, Lake and Norway House, where they made a forced landing, R. Marshall and S. Harrison, Canadian Air Force aviators, are now recovering at Norway House. They were rescued by an air force plane recently when they had almost given up hope.

Their clothing was in tatters and they were painfully weak when found. They were on fire patrol when the motor stalled and landed on the lake, and struggled unsuccessfully the first day in an effort to make repairs. They remained near the machine and on the eighth day their frantic signals attracted another plane to their rescue.

WORLD HAPPENINGS BRIEFLY TOLD

Regina was named as the scene of the 1930 convention of the Trades and Labor Congress of Canada. The western city defeated Hamilton by 169 to 75 for the honor.

Mrs. Jessie Campbell Ewart, wife of John S. Ewart, K.C., widely known aviator on constitutional law and history, died at her Ottawa residence recently.

Montreal proper has now a population of 1,071,067, according to Lovell's Montreal Directory, the 57th volume of which is about to be published. The population of Greater Montreal is 1,223,030.

Vilhjalmur Stefansson, famous Arctic explorer declares that the northern air route to Europe is the only practical one to develop and predicts that within 10 years there will be one day mail service from Winnipeg to London over the northern end of the world.

The Graf Zeppelin completed its 20,000 mile flight around the world in 21 days 7 hours and 34 minutes elapsed time. Actual flying time of the Graf was 31 days 23 hours and 14 minutes, beating the time of 35 days and six hours made by the United States army mail flyers in 1924.

Making Amazing Progress

Use Of English Has Outstripped All Other Languages

The amazing growth of the English language, surpassing that of any other during the past 100 years, was illustrated by statistics compiled by a newspaper published at Zurich, Switzerland.

English was spoken by less than 20,000,000 persons in 1850, the statistics showed, while at present no less than 160,000,000 people speak it natively, while an additional 60,000,000 understand it but do not consider it their native tongue.

The newspaper said that the rate of increase far outstripped all other languages and that there is no part of the world where the language is not spoken today.

Army Fights Locusts

Sixty-Five Tons Destroyed By People In Bulgaria

Every man and woman between the ages of 10 and 80 was recently mobilized by the government of Bulgaria to fight an extraordinary plague of locusts which were destroying crops in the Haskovo District of southern Bulgaria. Fire, smoke, fumes and oil were successfully used in combating the pests, but more than 65 tons of the locusts were destroyed before their depredations were finally terminated.

"Did you cancel all my engagements, as I told you, Southern?" "Yesir, but Lady Mildred didn't take it very well. She says you were to marry her next Monday!"

France has seven million cyclists. It is the most popular sport in that country. An annual distance bike race is one of the big sporting events each year.

Poet's Ashes Return Home

Biss, Carman Laid To Rest in Family Plot At Fredericton, New Brunswick

The ashes of Hilda Carman, who was Canada's greatest poet, now rest in a concrete tomb at the family burial plot at Forest Hill Cemetery, Fredericton, overlooking the city where he was born.

The ashes were brought from New Canaan, Connecticut, where he died, to Fredericton, and committed to their last resting place following a memorial service arranged by the Government of New Brunswick, and attended by distinguished men and women from many parts of Canada and the United States. One of Carman's best known poems was sung during the service at Christ Church Cathedral.

Winnipeg Newspaper Union

UNIQUE SPORTS TYPE

It's slender, trim and wearable. It's rather snugly wrapped treatment, so extremely smart and new. Style No. 560 is a boon to the woman with a stout figure. It conceals overhangs without a tell-tale line. See how the surplus closing holds with shawl collar carries the line down to straight closing of skirt to give the figure length. At each side of front, inverted plait add necessary width to hem. They are topped by patch pockets with envelope flaps. It's a model that adapts itself beautifully to all the smart cotton fabrics as contrasted plique in red and white or dots with white plique contrast as sketched. Yellow, blue, green, peach shantung with white, green and white checked gingham with green organdy, sky-blue silk, lace, cloth, steel-trimmed, orchid and white gingham, check in cotton, white with white organdy and shell-plink washable silk are suggested. It is available in sizes 16, 18, 20, 22, 24, 26, 28, 30, 32, 34 and 40 inches bust measure. Pattern price 25 cents in stamps or coin (coin is preferred). Wrap coin carefully.

A Great Mathematician

Professors Amazed By Rapid Mental Calculation Of Young Russian Woman

The world's most marvellous woman mathematician has been discovered in the person of Nina Glagolova, 22 years old, who does in her mind in front of 20 to 30 seconds, mathematical problems which require hours of experts to do, in the ordinary way, with pencil and paper.

This wonder woman has been discovered after a wide survey, and scientists are amazed at her lightning-like mental calculations. Before a commission consisting of Professor Kozlovskii and Professor Cheljevsky, mathematicians; Koloskiy, the engineer, and Dr. Kiselev, a physician, Miss Glagolova with apparently little effort, extracted the root in the ninth degree of numbers with as many as 20 digits. Squaring and cubing numbers of 9 or 10 digits seemed no harder to her than the multiplication table to ordinary humans.

Her memory is remarkable and she can repeat, having heard them, long lists of words in languages she does not know. The commission pronounce this woman of Russian birth, greater than Arago or other prodigies on record.

May Make Icebergs Visible At Night

Expert Making Series Of Experiments To Ensure Safer Navigation

Dr. Howard W. Barnes, internationally known ice-engineering expert, was at McGill University for a few days while his experimental ship, "The Ulvira," was undergoing repairs and refitting before starting out for a series of experiments in the Bay of Fundy.

Dr. Barnes stated that he had just completed three weeks of experimental work in the detection of icebergs at night in the vicinity of a tremendous and considerable photographic work for further experimental study in the laboratories at McGill.

To develop methods of making the icebergs visible at night is the objective of Dr. Barnes' present investigation. If he is successful, ships will be able to proceed at full speed either in darkness or fog in the vicinity of icebergs without danger of collision. His hopes will be put to the test at Lawrence route to Europe even safer than at present.

Petition For New Judicial District

Very Necessary To The Past Members Of Bar Association

Members of The Past Association will petition the provincial government to make a new judicial district there comprising all the territory north of Township 44 in Manitoba, according to a decision made at a meeting of the baristers.

It was pointed out that it was a great importance to The Past to have a judicial district. The lawyers do not ask that a resident judge be appointed, since the amount of work is not yet sufficient to make such a necessary, but they do feel that, in the interests of the north, a judicial district here is necessary.

When Breakfast Is Ready

Recent famous advice (those about to get married) have been equalled, we believe, by the American publication, "Life," which reports a husband as saying to his wife: "Well, I hear you scraping the toilet, so I suppose breakfast is ready."—Toronto Mail and Empire.

First Traveller—I hear they aren't sending any more mail to Washington.

Second Traveller—How's that?

First Traveller—He's dead.

The human body generates enough heat during a day to melt 44 pounds of ice and raise the liquid to boiling point.

The average life of an oil field is about three years.

New Means Of Solving Crime

Creator Of Sherlock Holmes Spots Of Impressions Of Mediums

In the well equipped police station of the future a trained clairvoyant would be part of the detective department, according to the creator of "Sherlock Holmes."

Sir Arthur Conan Doyle discussed the possibilities of a clairvoyant or a psychometrist helping in the solution of the Holtzman mystery and other puzzling cases confronting detectives throughout the world. He envisioned a day when criminals would be brought to justice by means of using a psychometrist would "sense" clues and hand them to detectives. "Although I do not think anyone could ever be convicted on the knowledge or evidence of a clairvoyant, I believe the latter can find clues where the police fail," Sir Arthur said.

"The proper term is psychometrist, the work having nothing to do with spiritism. It is purely a matter of the medium's own latent powers."

Sir Arthur gave as an example the finding of a blood-stained knife. The psychometrist, called to the scene, would inform the detective.

"I have a strong impression of a man with a long black mustache, wearing a brown suit."

According to Sir Arthur this would give the detective something to work on, as no matter how skillful the detective was, he could not have received an impression of the man's appearance from seeing the knife.

Western Air Mail

Expected That Service Will Commence About First Of November

Present indications are that air mail service in the west will commence about November 1, G. Herring, of Ottawa, superintendent of air mail service for the postal department, stated in Saskatoon. The service will connect Winnipeg, Edmonton and Calgary.

"Jim. Mr. Veniot, Postmaster-General, is particularly anxious to improve the service and is co-operating with the national Minister of Defence to obtain rapid installation of lighting facilities and landing fields," Mr. Herring said.

Establishing the air mail route will be a tremendous amount of work. Some 1,500 miles of territory have to be covered. Considering the fact that the main channel for the service will be through Winnipeg and Calgary, it has been thought desirable that the first steps should be taken toward lighting that particular part of the link. This task may not be accomplished for some weeks.

On completion of the work on the main link it is understood that provision will be made for night flying and intermediate flying fields between Regina, Saskatoon and Edmonton.

Canadians

Rising Generation Should Foster A Belief In Themselves As Canadians

Ancestry is something of which every man has a right to be proud, but whether native-born or not, it should not transcend a man's belief in himself as a Canadian. At our banquets and public gatherings, men of Canadian birth are prone to brag of their Scotch, English or Irish descent. If they placed more stress on the fact that they are Canadians it would at least serve as an example to newcomers to foster a belief in themselves as Canadians and not Scandinavians, Russians or Hollanders, as the case may be.—Chatham News.

To Study Empire Timber

With a view to finding new uses and new markets for the timber resources of the Empire, the Empire Marketing Board has approved a capital grant, not to exceed \$150,000, to be devoted to research on Empire timbers at the Princess Rissborough Forest Products Research Laboratory, London, under the auspices of the Department of Scientific and Industrial Research.

Fruit Production Problem

W. Sanford Evans, member of the Manitoba Legislature for Winnipeg, has been appointed a commissioner to investigate problems connected with the production and distribution of British Columbia fruits, particularly in the Okanagan Valley. The fruit industry is flourishing in the British Columbia Government.

Germany, the United States, the United Kingdom and France together, exported \$800,000,000 worth of chemicals and allied products in 1928.

Keep Your Farm Up-to-Date This Inexpensive Way

For Farm Homes

Faded or cracked walls and ceilings detract from the pleasure of farm life. Hundreds of farm owners, realizing this, have transformed their rooms into bright, colorful interiors by applying Gyproc over all the old, ugly surfaces—then decorating. Remarkably attractive results are thus achieved at small cost. Every room becomes much more beautiful, livable and up-to-date.

Utilizing Waste Space

Those messy, inaccessible waste spaces in your attic and basement. Why not convert them into extra rooms by erecting Gyproc walls and ceilings? You can have a playroom, a laundry room, a workshop, a special preserving closet or any other kind of room you wish.

For fast, economical, fire-proof construction on the farm there is nothing to equal Gyproc. Write us for information or see your nearest Gyproc dealer.

Recipes For This Week

(By Betty Barclay)

PATY CAKE PIE

- 3 eggs.
- 3 tablespoons lemon juice.
- 1 teaspoon grated lemon rind.
- 1 cup sugar.
- 3 tablespoons flour.
- 1/2 teaspoon salt.
- 1 tablespoon melted butter.
- 1/2 cups milk.

Beat eggs lightly with thick and lemon-cream. Add lemon juice and rind. Mix sugar, flour and salt, and add to lemon mixture. Stir in melted butter and milk and fold in stiffly-beaten egg whites. Turn into pie tin lined with crust and put into hot oven (450 degrees). After 10 minutes reduce heat to moderate (350 degrees) and continue baking 20 minutes longer, or until filling is firm.

GRAPE PRESERVES

For each pound of Concord grapes use one-half cup of sugar. Wash and skin the grapes—seeding also if you can spare the time. Use sugar equal to one-half the weight of prepared fruit. Boil sugar and water ten minutes. Add the fruit, and cook until grapes are clear and the syrup thick. Then pour into hot, clean jars and seal.

More things come to those who don't wait for them than to those who do.

Oil of roses is distilled from buds gathered in the morning while the dew is still on them.

Just a tasteless dose of Phillips' Milk of Magnesia in water. That's all, alkaline, effective, yet harmless. It has been the standard antacid for 50 years among physicians everywhere. One spoonful will neutralize at once many times its volume in acid. It is the only safe, quick, pleasant and efficient way to kill the excess acid. The stomach becomes active, the pain de-

Barns and Outbuildings

Gyproc lined barns and poultry houses provide the best protection against fire, cold, heat and vermin that your stock can have. You can erect strong, rigid Gyproc sheds yourself in short time and at little expense. After a few months you will be delighted with the improved look of your cattle and the increased laying capacity of your flock.

For fast, economical, fire-proof construction on the farm there is nothing to equal Gyproc. Write us for information or see your nearest Gyproc dealer.

Fireproof Wallboard

Recipes For This Week

(By Betty Barclay)

PATY CAKE PIE

- 3 eggs.
- 3 tablespoons lemon juice.
- 1 teaspoon grated lemon rind.
- 1 cup sugar.
- 3 tablespoons flour.
- 1/2 teaspoon salt.
- 1 tablespoon melted butter.
- 1/2 cups milk.

Beat eggs lightly with thick and lemon-cream. Add lemon juice and rind. Mix sugar, flour and salt, and add to lemon mixture. Stir in melted butter and milk and fold in stiffly-beaten egg whites. Turn into pie tin lined with crust and put into hot oven (450 degrees). After 10 minutes reduce heat to moderate (350 degrees) and continue baking 20 minutes longer, or until filling is firm.

GRAPE PRESERVES

For each pound of Concord grapes use one-half cup of sugar. Wash and skin the grapes—seeding also if you can spare the time. Use sugar equal to one-half the weight of prepared fruit. Boil sugar and water ten minutes. Add the fruit, and cook until grapes are clear and the syrup thick. Then pour into hot, clean jars and seal.

More things come to those who don't wait for them than to those who do.

Oil of roses is distilled from buds gathered in the morning while the dew is still on them.

Just a tasteless dose of Phillips' Milk of Magnesia in water. That's all, alkaline, effective, yet harmless. It has been the standard antacid for 50 years among physicians everywhere. One spoonful will neutralize at once many times its volume in acid. It is the only safe, quick, pleasant and efficient way to kill the excess acid. The stomach becomes active, the pain de-

Notice to Claimants and
Creditors

IN THE MATTER OF THE ESTATE
OF ALFRED "AL" SCANES, late of
Blandin, in the Province of Alberta,
Merchant, deceased.

NOTICE IS HEREBY GIVEN that
all persons having claims upon
the estate of the above named, Alfred "AL"
Scanes, who died on the ninth day of
October, A.D. 1928, are required to
file with the undersigned by the first day
of December, A.D. 1929, a full statement
fully verified of their claims and any
security filed by them and that after
that date the executors will distribute
the assets of the deceased among the
parties entitled thereto having regard
only to claims of which notice had been
so filed, or which have been brought to
their knowledge.

Dated this 11th day of September,
A.D. 1929.
WILLIAM E. HALL, 401 Longwood

Calgary.

Mr. and Mrs. D. McEachern
and Mr. and Mrs. N. D. Storey
left on a trip to Lethbridge this
morning.

Anglo-Dutch Ltd., Will

Undertake Oil Development

Absorption of the Anglo-
Dutch Oils Limited, a company
which has approximately 2,000
acres of oil and gas leases dis-

tributed throughout Southern
Alberta, by the \$5,000,000 com-
pany now in process of organi-
zation for developing 5,500
acres of lease in south eastern
Alberta, financed by Montreal
capital, was announced Tues-
day by James Ryan, of Calgary.

Mr. Ryan said that the name
of the new company which has
acquired acreage from the
Bangs Oil and Gas Company

near Empress, Alberta and the
Southern Saskatchewan border
would be the Anglo Dutch Oils
Limited, the name of the ab-
sorbed localities company being
taken. Mr. Ryan, will be man-
aging director of the new com-
pany.

The next step in the develop-
ment will be the sinking of a
well near Empress, Mr. Ryan
announced.

The Empress Express

"The World's Mine Oyster," Said Falstaff

"Why, then the world's mine
oyster, which I with sword will
open," said a famous character of
Shakespeare, but the modern ver-
sion relates to going around the
world in a big and comfortable
ship. It is no sword to open.
These are days of
the great world travelers, now
going their tours will be in-
vited to know that one globe-
striding liner will call at ports
Fishes omitted from her dis-
criminate—ports rarely touched by
other steamers. The "Empress"
is a 12,500 gross-ton
ship, a favorite with globe-
striders. It left from New York
on Jan. 1, 1929, on the seventh
annual Canadian Pacific World

Cruise. Besides making her
regular visits to the highlights of
the Mediterranean, to India, Japan,
China, Hawaii and other fascinat-
ing places, her itinerary this time
has been extended to include
Athens in Greece, Peking and
Bangkok in Siam, with further
calls at Keelung for Taiwan, in
Formosa. She will be gone 137
days, visiting 81 ports and places
in 24 countries.
Athens is really three towns in
one—the twisted lanes of the
Acropolis that was little more than a
Turkish village before the Greek
War of Independence, the broad
straight streets of the modern
capital and the interesting ruins
clustering round the Acropolis
resembling "The Glory that was
Greece." The Parthenon, one of
the most interesting ruins here,
was chief among the buildings with
which Pericles adorned the Acro-
polis about 450 B.C.
Bangkok, the capital of Siam,
was originally built on floating
